EDUCATION

Vivekanand Education Society's Institute of Technology

Bachelor of Engineering, Computer Engineering, GPA: 9.63

Jan 2023 - Jan 2027

SKILLS

Programming Languages: Java, Python, SQL, JavaScript, TypeScript

Frameworks & Libraries: FastAPI, React.js, Next.js, LangChain, Langflow, Hugging Face, PyTorch, Scikit-learn, XGBoost, LightGBM

Databases: MySQL, MongoDB, Firestore, Neo4j

Tools & Software: Docker, Linux, Cloud Run, Cloud Functions, ETL Pipelines, Data Processing, Vector Search, Embeddings, Semantic Search, OCR, Pandas, NumPy, CI/CD, Git, GitHub, HTML, CSS, Postman, VS Code

Cloud Platforms: Google Cloud Platform (GCP)

WORK EXPERIENCE

AI Intern

Jun 2026 -

Wabi Sabi Tech Solutions

- Engineered a live agentic voice helpline utilizing a RAG pipeline grounded in the company's knowledge base. Built and maintained the inference APIs in FastAPI, optimizing for low latency real-time interactions and defining strict API contracts.
- Curated domain-specific datasets from unstructured cybersecurity policies to automate risk assessments. Wrote automated evaluation pipelines and structured feedback loops to benchmark model accuracy, reducing manual review time by 60%.
- Containerized LLM services and backend workflows using Docker. Collaborated with product teams to handle inference edge cases, monitor models in production, and improve deployment reliability by 40%.

Cybersecurity Intern

Jun 2025 - Jul 2025

JSW Steel

- Learned enterprise cybersecurity practices, including network security architecture, firewall configurations, access controls, and threat mitigation strategies.
- Observed security operations and incident response workflows to understand enterprise security monitoring and risk management processes.
- Studied the role of enterprise security solutions including Fortinet, Netskope, and CyberArk in network security, CASB/SASE, and privileged access management.

PROJECTS

Raseed (Receipt Management for Google Wallet)

- An agentic app that lets you talk to your receipts
- Built an AI-powered receipt management system using Google Cloud and Vertex AI to process voice, image, and video-based receipts.
- Generated dynamic Google Wallet passes with receipt metadata, deep links, and spending summaries.
- Multi-level agents for interacting with your receipts and data using Google ADK.

PRISM

- Multi-layer AI-powered fraud detection system for privileged-user risk monitoring
- Engineered a real-time fraud detection platform combining Graph Neural Networks, ensemble learning, and evidence fusion to identify insider threats with reduced false positives.
- Developed a HeteroSAGE Graph Neural Network and stacking ensemble (XGBoost, LightGBM, Isolation Forest) with SHAP-based explainability for interpretable risk scoring.
- Designed a Dempster-Shafer Evidence Fusion engine to corroborate independent model predictions, amplifying high-confidence alerts while handling conflicting evidence through human review.

Nayak

- AI-powered cloud platform for infrastructure transparency and governance analytics
- Designed a cloud-native platform that aggregates infrastructure project data from government portals, news sources, PDFs, and YouTube transcripts into a unified repository using Firestore.
- Built automated data ingestion and validation workflows using Python, OCR, and Gemini to extract, verify, and transform unstructured documents into structured project metadata.
- Developed a Vertex AI RAG chatbot and serverless backend enabling citizens to query project timelines, budgets, delays, and verified updates with source-backed responses.

CERTIFICATIONS & ACHIEVEMENTS

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional - Oracle
- Google Generative AI Certification - Google

Jan 2025
